WCHAMPFX / FREE TRADER WORKBOOK

THE $1M FUNDED BLUEPRINT

A practical system to prepare for prop-firm challenges, build a repeatable trading process, protect funded accounts and scale with evidence instead of pressure.

PLAYBOOK
Define exactly what you trade.

RISK
Control loss capacity across accounts.

EXECUTION
Turn rules into a daily process.

SCALE
Add size only when the data supports it.

DAN CHEUNG / WANNABECHAMP

THE TARGET

01

What “$1M funded” actually means

A $1M funded target is a **nominal account-allocation target**. It is not $1M of cash and it is not a guaranteed income number.

$1M
Nominal funded-account allocation

DD
Actual rule-based drawdown capacity

RISK
Dollar loss if current stops are hit

PAYOUT
Only realised after eligibility and approval

Track these three numbers every day

Metric	Why it matters	Your number
Nominal funded capital	The headline allocation across all active accounts.	_____
Remaining drawdown buffer	The amount of rule-based loss capacity left before a breach.	_____
Combined open risk	What you could lose if every current stop is hit.	_____

> **Core principle:** scale the process, not the headline account number.

My $1M target matters to me because...

BEFORE YOU BUY

Challenge readiness scorecard

Do not make the evaluation fee your first step. Check whether your process is actually ready for pressure.

- I can explain my setup in one paragraph.
- I know which sessions and instruments I trade.
- I have tested enough trades to estimate my edge.
- I understand the firm's drawdown calculation.
- I know minimum-day and inactivity rules.
- I will journal every trade.
- I have fixed entry and exit criteria.
- I have a repeatable position-sizing method.
- I have a daily stop rule before the session starts.
- I have checked news / overnight / weekend rules.
- The challenge fee does not create urgency for me.
- I know exactly what makes me stop for the day.

Score

0-4
Build the process first.

5-8
Close, but gaps can become expensive.

9-12
Re-check official rules and execute your plan.

The biggest gap in my process right now:

RULE CLARITY

Your one-page rules audit

Translate official terms into the rules you will actually follow. Leave a personal safety buffer where appropriate.

Rule	Official limit	My personal buffer / rule
Daily loss		
Overall drawdown		
Max open risk		
Minimum trading days		
Inactivity limit		
News restrictions		
Overnight / weekend		
Payout eligibility		
Other operational rule		

What could accidentally breach this account?

Examples: correlated trades, spread expansion, platform reset time, duplicated positions, news windows, open floating loss...

PLAYBOOK

Build your one-page trading plan

The source workbook defines a playbook as your personal rules of the game: what you trade, how you enter and exit, how you manage risk and what you do in different market conditions.

Block	Write your rule
Market / instrument	_____
Session / time window	_____
Setup name	_____
Market context required	_____
Entry trigger	_____
Stop placement	_____
Take profit / exit	_____
Minimum R:R	_____
No-trade conditions	_____
Max trades / session	_____

Make it binary: if a rule cannot be answered with yes/no or a specific number, it may be too vague to execute consistently.

RISK

Risk math traders should know

Track risk in dollars as well as percentages. Then compare that risk with the account's remaining drawdown buffer.

Nominal account	0.25% risk	0.50% risk	1.00% risk
$50,000	$125	$250	$500
$100,000	$250	$500	$1,000
$200,000	$500	$1,000	$2,000

Drawdown utilisation: planned loss on the trade ÷ remaining drawdown buffer. Example: $500 planned risk with $8,000 of remaining buffer = 6.25% of the buffer.

Position-size process

1. Choose the dollar risk allowed by your plan.
2. Place the stop where the setup is invalid.
3. Calculate size from stop distance and risk dollars.
4. Check the same trade idea is not duplicated across other accounts.

Risk setting	My rule
Risk per trade	
Max open combined risk	
Daily stop	
Weekly review trigger	

EXECUTION

06

Daily execution card

The goal of the session is to produce a clean sample of your process - not to force a profit target.

Before

- Focus / sleep acceptable
- Calendar checked
- Key levels marked
- Daily stop written
- No-trade conditions known

During

- Setup qualifies
- Risk calculated
- Exposure checked
- No risk increase after entry
- Exit follows plan

After

- Screenshot saved
- Journal completed
- Rule breaks recorded
- Stop condition respected
- One lesson written

Session snapshot

Date	Account	Setup	Result (R)	Rule score /10	Emotion /10

One thing I executed well / one thing I improve tomorrow:

JOURNAL

07

Turn every trade into data

The source workbook repeatedly treats journaling as a core success habit. The useful journal captures process quality as well as P/L.

Field	Entry
Date / time	
Instrument / session	
Setup / confluences	
Entry / stop / target	
Risk $ / %	
Result in R	
Did I follow the plan?	YES / NO - why?
Emotional state	
Screenshot link	
One lesson	

Post-trade notes: what did the data teach me?

Journal the trade you did not take too. Skipped A+ setups and avoided bad setups both reveal information about discipline.

SCALE

Evidence before size

Gate	Minimum evidence before moving on	Status
Add next challenge	Sample complete + no unresolved rule confusion.	☐
Add second funded account	First account executed cleanly through payout eligibility.	☐
Move above $200K	Combined exposure tracker used consistently.	☐
Move above $500K	Performance stable after previous size increase.	☐
Target $1M	Operations, rules and risk remain manageable.	☐

$1M transparency dashboard

Metric	Current	Note
Challenge fees paid		
Evaluations active / passed		
Funded capital active		
Payouts received		
Accounts breached		
Combined open risk		
Remaining DD buffer		
Rule adherence %		

Update the dashboard whether the week was good or bad.

Want More Access? Join the WChampFX Community

Offer 1

Community Access — $99

- A great starting point for traders who want more than the free guide.
- Get access to the private community, live sessions, trade ideas and webinars.
- Best for traders who want to stay connected and keep learning consistently.

Join Community

Offer 2

WCP 2.0 + 3.0 — $399.00

- A structured trading program for traders who want deeper education.
- Get strategy training, risk management, mindset support, live sessions and community access.
- Best for traders who want a full learning system with practical guidance.

View Offer

Offer 3

Premium Mentorship Access — $1,999.00

- For traders who want the highest level of support and access.
- Includes deeper guidance, advanced support, live sessions and a stronger learning environment.
- Best for traders who want serious commitment and closer support.

Join Now

Educational content only. Trading and prop-firm evaluations involve risk. Course access does not guarantee funding, payouts or profitability.

NEXT

Your funded journey should get simpler as it grows

Keep	Remove
One tested setup	Random strategy switching
One written risk framework	Risk changes made mid-trade
One journal + review process	P/L-only decision making
One exposure dashboard	Hidden duplicated risk
One scaling gate	Size added because of urgency

Build the trader first. Then build the allocation.
